

Virtudes Pontes Sánchez and her research activities

Dear readers,

I am very glad to share with you my unusual and impressive discoveries. Even though I was very shocked at the beginning, we wanted to disseminate these pieces of information – to the best of our knowledge and belief with regards to the communication of new fields of vision to humanity in order to obtain a better understanding of our true history.

Recognizing that there is still much more to know and to understand about us. It is about a truth which can provide us more freedom and make us more human.

My name is Virtu Pontes. I am 55 years old and I began with the age of 24 years to study the old scriptures, apocrypha, mythology and legends, specially the megalithic archaeology.

31 years of research on these areas, this can ensure you that they are full of many surprises.

I was astonished that many of the existing truths and facts hasn't already been taught at universities and colleges. This situation draw more my curiosity, so I unconditionally wanted to discover the reason. Such obvious truths can be found all over the world in the end, such as the evidence about megaliths, as well as the absurd theories about the way of their construction. Numerous reports of ancient text about hybridization have been constantly denied by official institutions and their studies. And according to the findings of these texts many "natural catastrophes" were caused by ancient civilizations.

All this might sound incredible or look like an illusion. But when I can prove with the magnificent discoveries, that we find representations in the Jordanian Black Desert (and in other places of the world) which resemble the microscopic images from embryonic levels of development, stem cells and other

things, and that professional biologists have already confirmed this representation – then, it doesn't sound so weird. It is reality! And given that my team and I consider it our duty, we work for their investigation and detection.

We have already had contact with the Jordanian authorities and we hope that we are supported with our research, which can very useful for this country and the whole world.

I am sure that everything that we depict as mysterious, supernatural or mystic can be scientifically explained. We have already achieved a stage where science is prepared to carry out research about all, to investigate, to understand and to acknowledge the results arising from the research of these geoglyphs – a historically significant moment in the history of mankind!

Here you have a picture showing the geoglyphs at the ground level of the desert:

Millions of stones of basalt were manifestly sectioned in pieces and placed in such a manner, that they build microscopic representations up. Pursuant to the appraisal by archaeologists they are dated 8,500 years old...

It is astounding that these representation can still be seen after such a long time very clearly, as well as that they were not destroyed through natural weather events or covered through the desert sand.

The fact, that these sites relate to images of embryos is not only amazing. The way in which these images were constituted and their extent with reference to the size and the surface of the different countries where they were found (sizes vary and they spread over several countries) confront us with big challenges. The scale and scope of this research makes the cooperation with the Jordanian government very important for the progress of the revelation of these findings. I am very sure that this will be an important turning point for humanity in all aspects of life.

Each research has a beginning

It was one night, I was driving my car, then, I saw the full moon coming up behind the mountains. It was wonderful, orangecoloured, completely round – a full moon. When I was contemplating it, I saw two orange lights

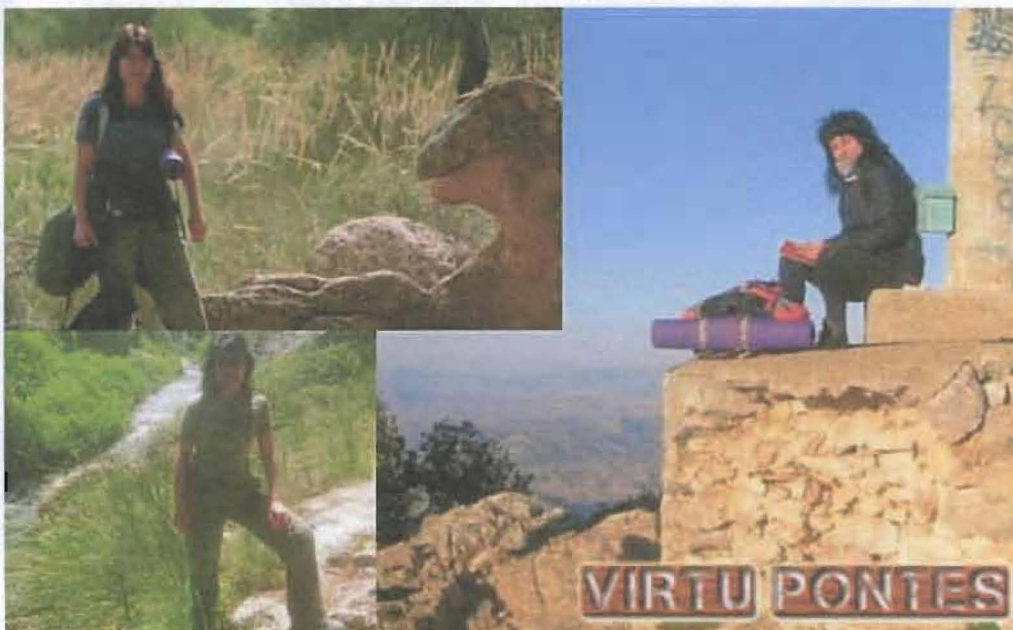

sah ich zwei orangefarbene Lichter in Form von Kugeln auf den Mond zukommen, die sich in gleicher Entfernung übereinander befanden, und ich sah, wie sie beide die Form des Mondes annahmen. In diesem Augenblick sah ich drei Monde, die senkrecht übereinander standen, und die sich nach etwa 30 Sekunden wieder zu einer orangefarbenen Kugeln formierten – und in rascher Geschwindigkeit, ca. zwei Sekunden dauerte es, stiegen sie empor.

Thousands of questions turned around my head; am I OK? Am I on the edge of losing my mind? Do I have any disturbance of vision? This experience induced me to look for people who experienced the same situation.

Many spoke about UFOs and spaceships from other worlds. An explanation for my experience was not included there – and my medical check-ups were impeccable.

On the strength of this, I read much about peculiar sightings, mysteries and mysticism. However, instead of finding answers, more questions still appeared.

I began to read ancient scriptures, apocrypha, mythology and legends. It was clear to me that something didn't add up with our official textbooks and manual which are studied at schools and colleges. Many facts and pieces of information were excluded. But this should also be proved for the first time! For this reason, I began to travel and to look for proofs and evidence, even though I had a small budget and I was only provided with a tent, a mat and a sleeping bag. In Spain, my home country, I found interesting proofs.

When the subject of ancient texts is related to certain technologies and secretive stones and caves, they report also about very dark tunnels, which should be located in our planet. In some areas of Spain, where mythology and legends are mentioned, I started to search until I finally found them. One of my most important discoveries show I to you on the following

picture. It tells about wood which is imbedded in artificial rocks – refuting the theories about the formation of sandstone rocks. In a mountain overhang, where the erosion from thousands years has already removed the stone, at the place most affected through weathering a piece of wood, which was inserted in the wall of the rock overhang. Not only said piece, but also rests of shells from mollusks were found there. In this stone complex we talk about a sierra hill, located 1,068 meters from the sea level and 60 kilometers distant from the sea.

When abrasion, wear and tear and weathering of the stone sets free pieces of wood and seashells over thousands of years, then this means that the theory of the formation of gigantic artificial stones, which were manipulated with the help of certain technologies, is true?

Therefore, let's continue. Another discovery was located in Spain. It deals with an addition rock with traces bringing forth manipulations and its artificial production, as if the rock had been softened. Take a close look at the picture and pay attention to the important details; in particular, geologists should extract some ideas and information from this rock.

You will find here an additional picture from my research. In particular, the artificial markings and the quite high situation are very interesting. For the cave dwellers of said time, the troglodytes, it would not have made sense to carve such inscriptions on the rocks. In order that you can have a better idea to my allusion I appear on the picture.

In this picture it can be determined through the clearly and intentionally made circle-shaped markings and lines, which can

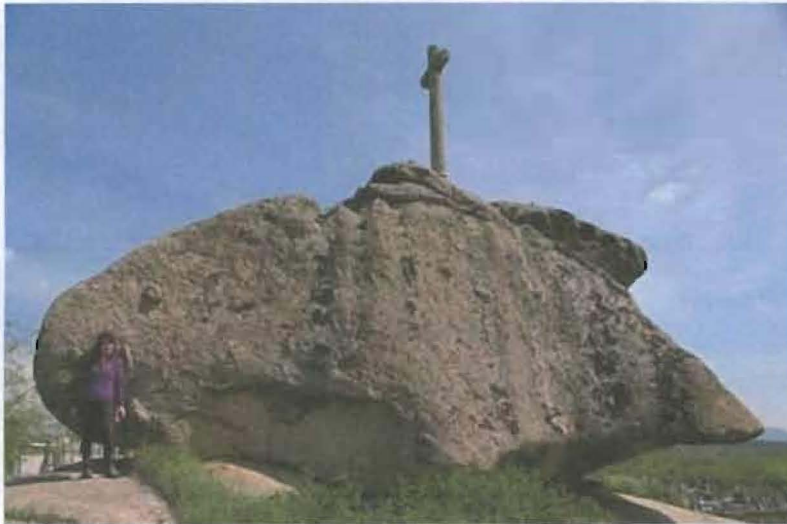

be distinguished as cavities in soft stone. As a result, they were not worked into with hits and with blows.

An additional picture where an arrow can be clearly distinguished in the rock – directly over my shoulder.

This picture shows a giant rock.

I am convinced it is not a coincidence that a cross was put on the rock above.

These pictures are only a small part of my research. However, there is still much more to discover, including ancient texts, lore and traditions. With the investigation work which will take place in Jordan we will begin to find answers, above all, to the question about who forged these geoglyphs, when and for which purpose.

In the name of my courageous team I am looking for sponsors and supporters for our pioneering research project, in order to complete it and to publish its results and findings. Our purpose is to provide solid information about the unity of humanity and grant many advantages and improvements for science. The discoveries will contribute to give explanations about many lies existing in the world, as well as to establish sound foundations for peace.

With a flow full of tenderness and a thankful wish I send you kind regards from Spain,

Virtudes Pontes Sánchez

THESIS FOR THE INTRODUCTION IN THE MEANING OF THE GEOGLYPHS OF THE JORDANIAN BLACK DESERT:

Virtudes Pontes Sánchez

Researcher with research activities for more than 28 years in the areas of ancient scriptures, apocrypha, mythology, legend and megalithic archaeology.

Introduction to my discovery in the Jordanian Black Desert

The central aim of this dissertation is to prove the true history of humankind, as well as the reality of the creation of human being and the other living creatures and confirm through completely conclusive and verifiable evidence by any expert in biology.

The current issue is addressed to all disciplines of biology in all fields of research concerning living species, the human being, together with all animal and vegetal beings in order that all experts keep a close eye to the next statement of facts and evidence:

In the Jordanian Black Desert several circles can be clearly distinguished thanks to the technological development which makes effective the high-definition photographing from satellites. Said circles compound specific geoglyphs and are created with stones of basalt. Furthermore, they are still a matter of speculation by archaeologists, who have speculated about different theories and scopes. However, no archaeologist has a clear idea of what they really represent and their finality.

When I saw those images and after my experience of more than 28 years researching the ancient scripture and the megalithic archaeology I realized what the above mentioned circles of basalt are and the role they fulfill. You will find some pictures of the aforesaid circles and my thesis explaining my conclusions here below:

Picture of the geoglyphs located in the Jordanian desert.

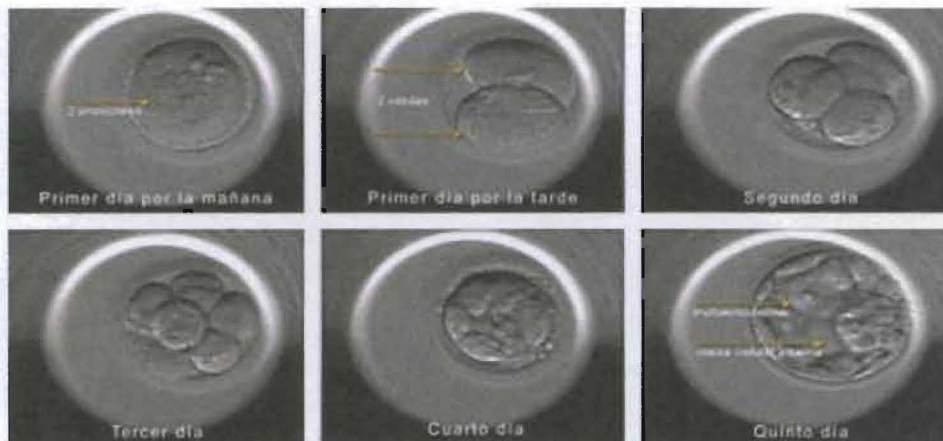

Hereby I put before you my research: The concerned geoglyphs constitute maps of embryonic experiments, and if you pay close attention to the picture you will realize the result of two species: one is human, whereas the other is reptilian.

The five embryos located on the left side of the picture are human, whereas the remaining embryos are reptilian.

They show the embryonic development until they become blastocyst.

Please find here below several pictures representing the different stages of development of an embryo until it becomes a blastocyst through the microscope.

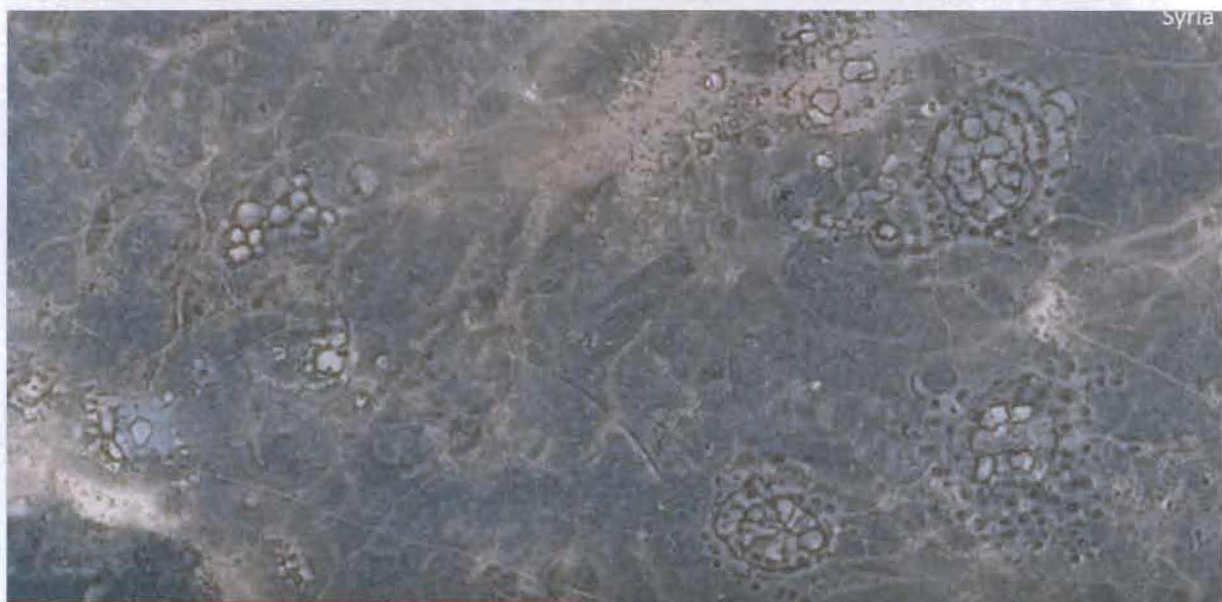

As you can see, the pictures representing the geoglyphs and the latter pictures are the same kind of pictures. Both display embryos in development, with the difference that the geoglyphs located on the desert are dated 8,500 years old pursuant to archaeologists.

These geoglyphs are not only situated in the Jordanian desert, but also in more countries, as well as around the area where the ancient scriptures speak of the Garden of Eden.

There are geoglyphs representing stem cells as well, such as these appearing on the next pictures:

There is, in fact, much more in said vast area than you can imagine, till a good explanation is issued about the reason of their composition of stones of basalt. There are plenty of images able to prove that we all were created here and that there is no theory of evolution. The ancient scriptures are right in saying there is creation.

As you shall see, it is easy for biologists to verify this. I know it is real and represents one of the greatest discoveries for humankind to see its true origin.

Those biologists and geologists who are willing to show the truth to the world will be very interested for this project. I have gathered a team of experts in order to explain all what these geoglyphs represent and mean along with all my research.

These geoglyphs constitute conclusive evidence both of our origin and the origin of the other species populating this planet. We have already established contact with the Jordanian authorities.

Even the ancient scriptures report that science would move forward and would tell and the sealed books would be opened. Books as these were written throughout the planet, science progressed and microscopes and satellites were developed whereas said books are being opened.

I have the most evident project to expose to the whole world the real history. The considerable consequences for science will take place for in all biological disciplines, both in human biology and in zoological and plant biology. The results of this study will initiate unique and spectacular work activities for such a discovery in the history of mankind.

This research will open new paths for different disciplines, in particular, in the areas of biology, geology, natural sciences, archaeology, philology and free energies.

For more questions about my project you will find my contact details here below:

Thank you very much for your attention and I send you kind regards,

Mrs. Virtudes Pontes Sánchez.

Suggestion of work guidelines for the biological research of the geoglyphs of the Black Desert.

Draft version 1

Determination through observation, benchmarking of experts, of the structures existing in the Black Desert in Jordan, Syria and Saudi Arabia.

Introduction

The researcher Mrs. Virtudes Pontes Sánchez and his collaborator, observed the aerial video of the Black Desert in Jordan and its neighboring countries, observing the similarities with ovarian and embryonic structures.

Structures made on the earth have been widely reported which can only be observed from the space. Some examples include the lines of Latin America located in Nazca.

Taking a closer look the Nazca's figures, as well as the figures of the Black Desert in Jordan have a specific objective to be transmitted to the persons who can see them and infer their message and the legacy they have left to us, given the similarity with microscopic images in the case of Jordan, Syria and Saudi Arabia.

In order to ascertain what these images represent there needs to be an effort of study and multidisciplinary comparative observation both in the areas of plant, animal and human biology, as well as with histology, biochemistry, molecular genetics, archaeology, engineering, mineralogy, geology and other sciences.

Objectives

The question does arise, whether, these figures are natural or artificial?

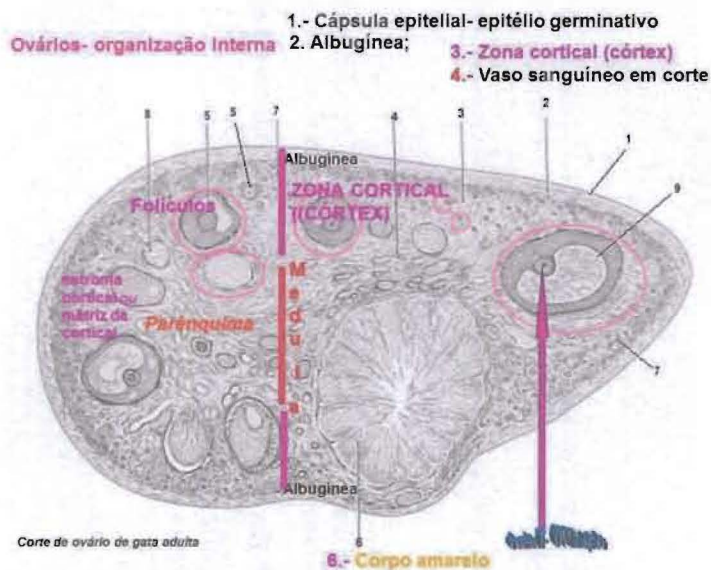

By the nature of the structures which are observed in this desert and by the comparative analysis with the microscopic images of the ovarian and embryonic structures.

For this reason, we attach some images of the desert and microscopic images of a woman's ovary.

Pictures: 2 images of the desert Corpo Albicans

Secondary or tertiary follicle

Microscopic images of a woman's ovary. Translation of the image:

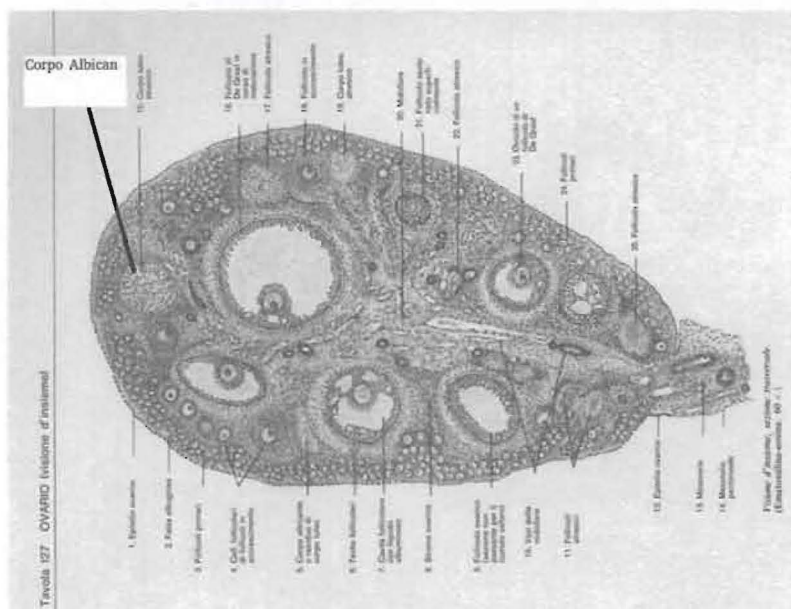

Ovaries – internal organization

- 1.- Epithelial capsule-germinating epithelium
- 2.- Albuginea
- 3.- Cortex
- 4.- Blood vessel in cross-section
- 6.- Yellow body

Parênquima: parenchyma

Estroma cortical ou matriz da cortical: Cortical stroma or matrix of the cortical

Oócito II ovulação: Oocyte II ovulation

Microscopic images of a woman's ovary

Possible representation of an ovary.

On a more detailed observation we can affirm that the similarities between the structures are approximately 98 %. We must reiterate that these comparisons shall be carried out by a multidisciplinary team.

Many other images in the sequence of the film shall be thoroughly studied by the multidisciplinary team.

The main aim of this research is to ascertain whether there are statistically meaningful similarities between the structures of the desert and the real microscopic images of the ovarian and embryonic structures.

If possible, to determine whether these images are from reptilian embryos, mammals or whatsoever other species.

Material and methodes:

On the basis of a comparison of the data by several multidisciplinary teams by observation, comparison and determination of the proportions of several structures with the biological structures to determine their degree of similarity by statistical analysis.

To understand how these structures have arisen and their dating by archaeological, mineralogical, geological, architectural and landscape observation *in locu*.
